PROFESSIONAL SUMMARY

Aspiring Software Engineer Intern with hands-on experience building full-stack web applications on the MERN stack and a strong foundation in DevOps automation, including containerization and cloud deployment. Combines backend systems configuration experience with a genuine passion for streamlining and automating deployment workflows. Eager to apply solid full-stack and infrastructure fundamentals to a fast-paced software engineering team.

TECHNICAL SKILLS

Frontend / Web: React.js (MERN Stack), HTML, CSS, JavaScript, TypeScript, Tailwind CSS

Backend / Software: Node.js, Express.js, MongoDB, REST APIs, System Design, Python

DevOps / Cloud: Docker, AWS (EC2, S3), GitHub Actions, CI/CD Pipelines, Linux/Server Configuration

Networking / IT Infrastructure:

FreePBX, VoIP/PBX Systems, MikroTik RouterOS, IP Networking (Routing & Subnetting), Linux System Administration, CCTV Systems, Hardware Diagnostics & Repair

PROJECTS

Richenia Tech — Core IT Helpdesk Engine (ITSM & Ticketing Platform)

- Engineered a full-stack IT service management and ticketing platform on the MERN stack (MongoDB, Express, React, Node.js) with Tailwind CSS v4.
- Built a secured Express middleware pipeline with a defined execution order, CORS preflight handling, Helmet-enforced Content Security Policy, and rate limiting, to prevent CORS handshake failures and service exhaustion attacks.
- Implemented role-based route protection for admin/analytics dashboards using React ProtectedRoute wrappers, redirecting unauthenticated access attempts with error handling.
- Designed a system-synced light/dark theming engine with hardware-accelerated transitions and a cohesive, distraction-free visual language.

GuardRail — Enterprise Async File Ingestion & Malware-Scanning Pipeline

- Architected an asynchronous file ingestion and malware/threat-scanning pipeline with a blob-routing design built for enterprise-scale reliability.
- Developed a 28-test pytest suite to validate ingestion and scanning logic, ensuring consistent, regression-safe deployments.
- Containerized services with Docker Compose for local orchestration and deployed to Azure Container Apps using Terraform-managed infrastructure.

Richenia Shop — Full-Stack E-Commerce Web Application

- Audited and modernized a 47-file PHP/MySQL/vanilla JS codebase, restructuring routes and deploying to Vercel via the vercel-php runtime.
- Implemented a database-backed session handler and environment-variable-driven configuration for portable deployment across environments.
- Configured clean-URL rewrite rules and resolved production deployment issues to deliver a fully functional live application.

PROFESSIONAL EXPERIENCE

IT Support and Network Technician Intern — Licaland | Feb 2026 – Apr 2026

- Configured FreePBX directly via its command-line console to integrate a telephony card with the PBX system, enabling communication with IP phones.
- Configured MikroTik routers, access points, and Wi-Fi networks across commercial building and mall facilities to ensure reliable connectivity.
- Participated in CCTV camera installation, setup, testing, and troubleshooting for commercial site deployments.
- Performed hardware diagnostics, repair, and assembly of desktop systems, restoring non-functional PCs and networking equipment.
- Applied Linux system administration and IP networking principles (routing, subnetting) to configure and maintain backend infrastructure.
- Maintained technical documentation and equipment inventory records and collaborated with cross-functional technical teams to troubleshoot software and network-related issues in a live production environment.

Education

Bachelor of Science in Information Technology

Expected Graduation: August 2027

Rizal Technological University

704 Boni Avenue, Mandaluyong City

Certifications

National Certificate II in Computer Systems Servicing (2023)
